DRAFT IQ ANALYTIC SEASON 23-24

NBA PLAYER INTELLIGENCE

QUALIFIED PLAYERS 572

01 Performance Index | **02** Position vs Contribution | **03** Efficiency vs Volume

INSIGHT

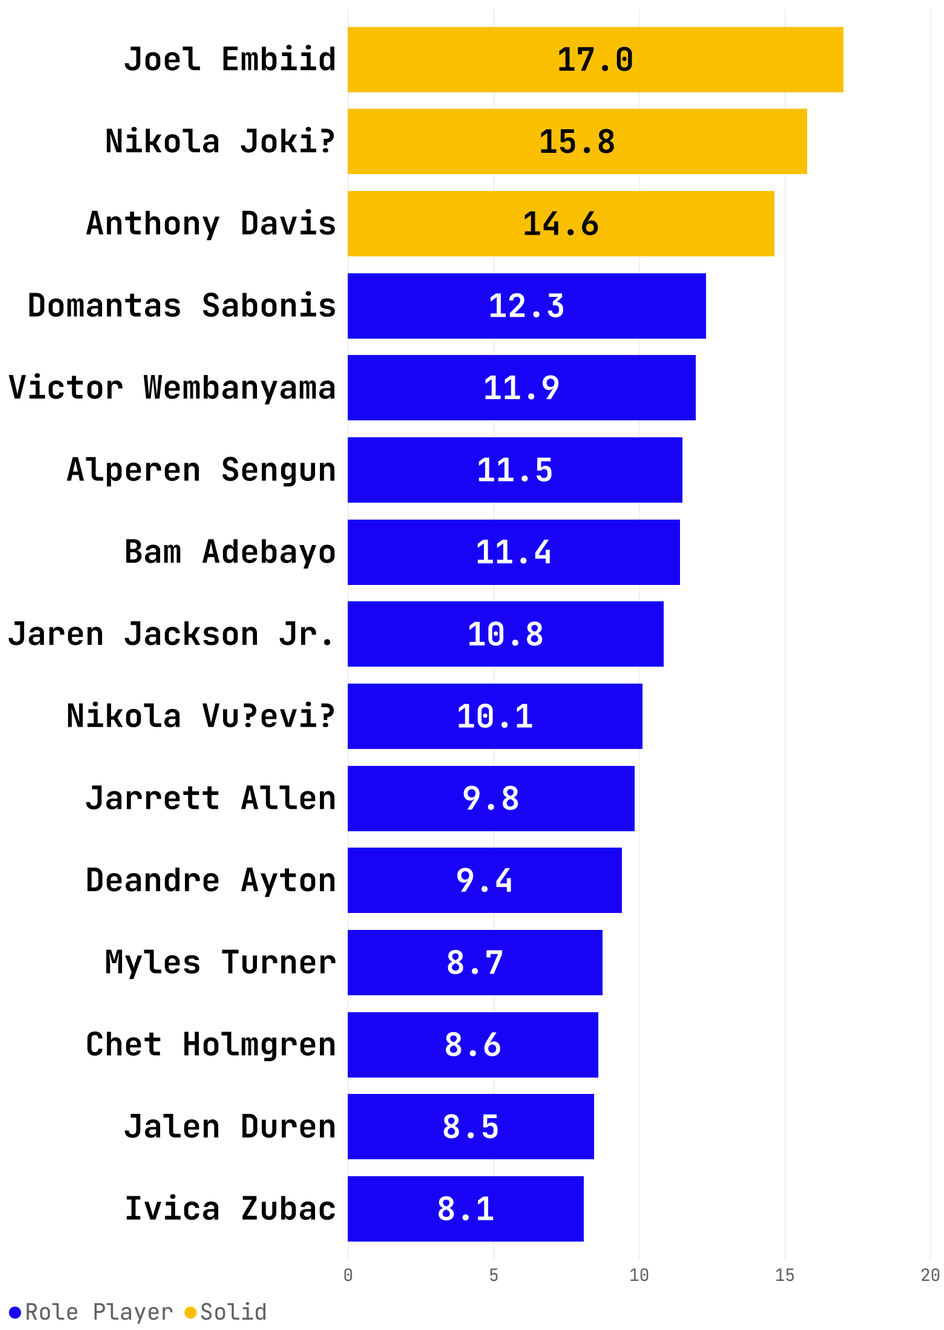

"A player who scores 28 points but has 2 assists and 3 rebounds is worth less to a franchise than one who scores 22 with 9 assists and 8 rebounds. The Performance Index captures total contribution, not just the highlight reel stat."

#1 By Index	League Average	Elite threshold
Luka Doncic	4.68	2.87

DRAFT IQ ANALYTIC SEASON 23-24

NBA PLAYER INTELLIGENCE

QUALIFIED PLAYERS 572

01 Performance Index | 02 Position vs Contribution | 03 Efficiency vs Volume

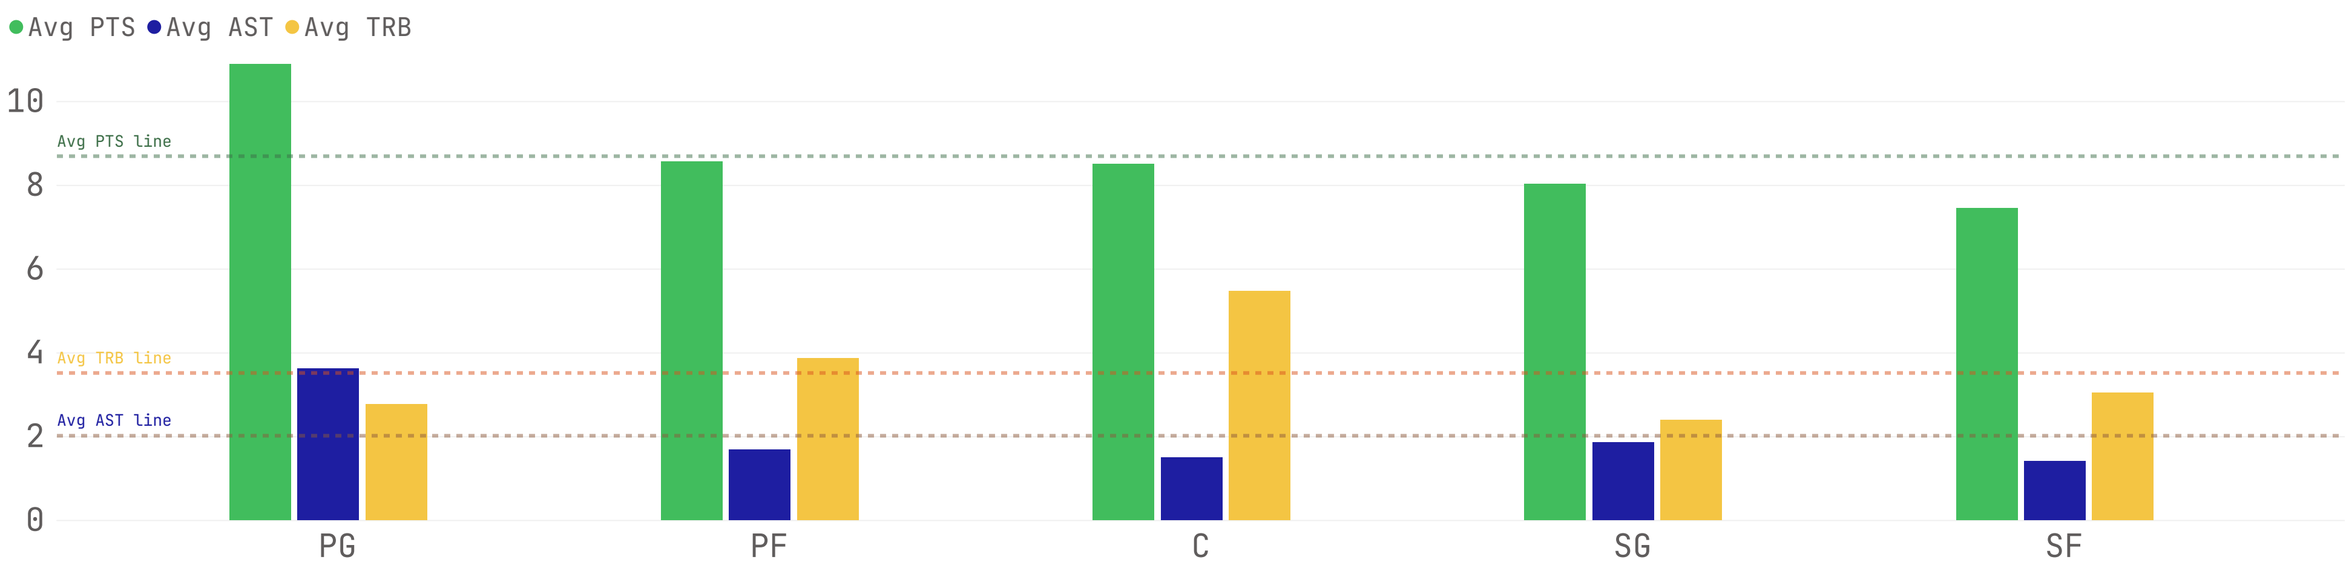

INSIGHT

"*Centers dominate blocks and rebounds* as expected — but modern NBA centers now average more assists than SGs did a decade ago. The position boundaries are blurring. The data confirms it."

TOP REBOUNDER POSITION	TOP ASSIST POSITION	MOST VERSATILE
avg. 9,2 TRB/game	AVG. 7.1 AST/game	closest to league avg in all metrics
C	PG	PF

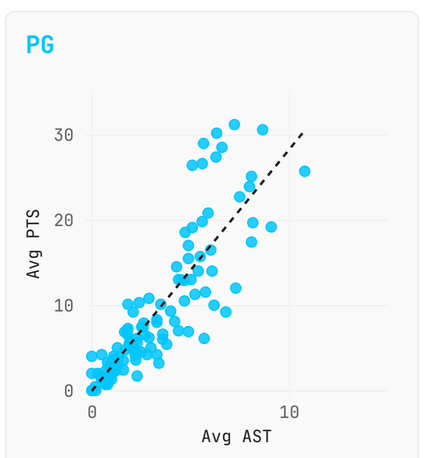

Avg PTS, AST and TRB by Position

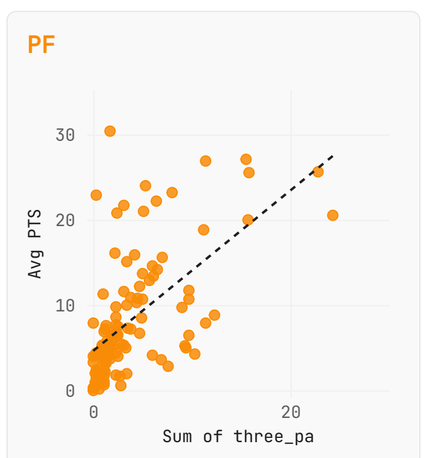

Dashed lines = league averages. Bars above the line = above average for that metric.

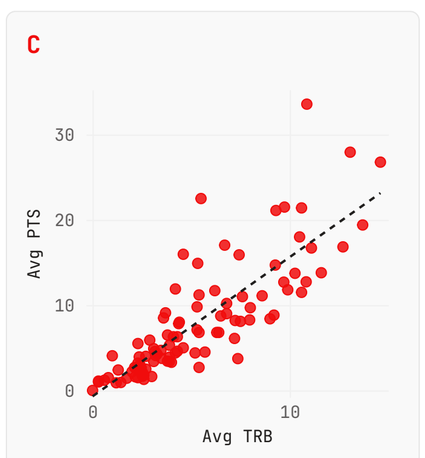

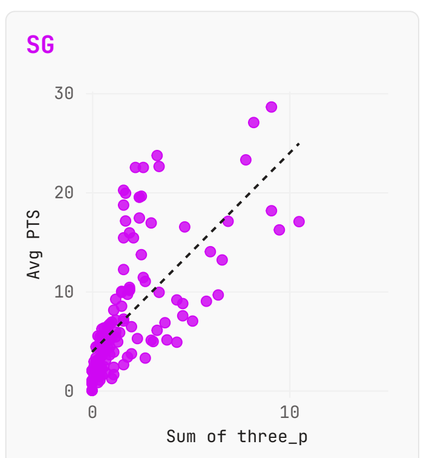

Does the PTS/AST relationship look the same for every position?

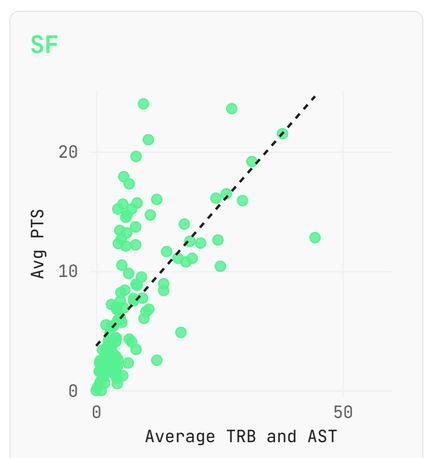

It shouldn't. PGs assist more, Centers score from close range. Compare the shape of each panel.
